

Presentation

This programme is a top level engineering training in two years for international students with a Bachelor (or equivalent) degree.

In order to diversify its recruitment and contribute to the training of engineers with a dual qualification, from their home country and from a European country, INSA has opened a course for students aiming at an international career.

40 places are offered to students holding a Bachelor's degree in Science or Engineering prepared over four years in their home country. At INSA, these students follow two years of study (in French) leading to a Diplôme d'Ingénieur INSA, a Master's degree.

The recruitment, reception in France, French language summer school, and the «transition semester» are organised by a network of over 75 engineering schools which have decided to work together to offer a better welcome for these students : "[n+i](#)" programme. The remainder of the course is organised by INSA.

The specializations offered are :

- * [Biochemical engineering](#)
- * [Civil engineering](#)
- * [System engineering](#)
- * [Automatic control, Electronics](#)
- * [Computer engineering](#)
- * [Networks and Telecommunications](#)
- * [Mathematical and modelling engineering](#)
- * [Mechanical engineering](#)
- * [Physics engineering](#)
- * [Chemical engineering.](#)

Information
