

## 1st YEAR

# Introducing

---

## Description

---

## Évaluation

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

## Practical info

---

## Location(s)

 Toulouse

## Algorithmics

# Introducing

---

## Description

Semester 1 :

Definition of functions; control structures (FOR, WHILE, IF); variables; record type.

Basic algorithms (min, max, average, etc. applied to a collection of data)

Rules of typing and proper formation of a program.

Semester 2 :

Enumerated types; 1D, 2D arrays (matrices); exploiting structured data (nested arrays and records) ;

Basic algorithms (above) applied to structured data

---

## Objectives

The objective, at the end of the two semesters of algorithmics, is to have understood :

- the notion of algorithm and typing ;
- nested data structures ;

and to be able to :

- design algorithms for simple problems (e.g. finding a min in a collection of structured data);
- write them as reusable subroutines (functions) in Ada ;
- test their validity using unit tests

---

## Évaluation

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

# Mathematical rigor and reasoning

## Introducing

---

 Toulouse

## Description

---

Argumentation, rigor and reasoning (AR): Reasoning, proof writing, set manipulation

## Objectives

---

Acquisition of the basics of reasoning mathematics.

## Necessary prerequisites

---

High school knowledge in mathematics

## Évaluation

---

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

## Chemistry

# Introducing

## Description

Electronic structure of atoms - atomic Orbitals - periodic table of the elements - Periodicity of the properties - Covalent bonds - Molecular orbitals - pH of aqueous solutions - Solubility, precipitation - Oxidation, reduction.

Laboratory work: Set of six experiments, introducing the implementation of basic laboratory equipment - Titration by acid-basic and oxidation-reduction reactions - Titration by precipitation reactions - Spectrophotometric and potentiometric titrations (pH-metric, silver electrode) - Equilibrium of affinity per exchange of ions.

## Objectives

1. Memorize the definitions and the chemistry-related vocabulary.
2. Determine the atom structure
3. Describe the structure of the periodic table of the elements.
4. Propose a structure for a molecule (Lewis and spatial) from its raw formula.
5. Describe the link within molecules.
6. Describe the structure of metallic and ionic solids.
7. Describe interactions between molecules.
8. Describe the liquid water structure and explain the main reactivities in solution (equation balance sheet reflecting a reaction of dissolution, precipitation, acid-basic or oxidation- reduction).
9. Analyse a problem to identify the ingredients likely to be present in solution. Deduce one or several equations

showing the conservation of elements, the electro neutrality and the constant of balance.

10. Solve a problem about chemistry solutions coming up with as equation as there is unknowns in this problem in order to calculate the unknowns' concentration.

11. Describe the principle and be able to implement the basic experimental technics for the analysis

12. Carry out a lab experiment and analyse the result.

## Necessary prerequisites

Basic knowledge in physical science (atoms structure, radiation) and in chemistry as describe in the program of the final year high school science.

## Évaluation

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

 Toulouse

## Electrical phenomena

# Introducing

## Description

### Electrokinetics 1

- \*Fundamentals of electrokinetics (current, voltage, resistors)
- \*Study of electrical circuits
- \*Current/voltage calculations using various theorems

### Electrokinetics 2

- \*Linear components in transient state (resistors, capacitors, coils)
- \*Transient state and mathematical tools, first and second-order circuits
- \*Sinusoidal state and complex notation

### Electrostatics

- \*Scalar fields, vector fields
- \*Differential operators of field theory
- \*Invariances and Symmetries
- \*Electric charges and their interactions
- \*The electric field
- \*The electrostatic potential
- \*The local equations of the electric field and the electrostatic potential
- \*Calculation methods and application examples
- \*Conductors
- \*Capacitors and electrical energy

## Objectives

This course is divided into three modules (Electrokinetics 1, Electrokinetics 2, Electrostatics). It begins with an introduction to the basic concepts of

electrokinetics (current, electric potential, voltage, etc.), the study of voltage/current generators and resistors, and their characteristics in a steady-state regime. This is followed by the study of electrical circuits using various general laws and theorems. Topics covered include Kirchhoff's laws, superposition theorems, Norton's theorem, Thévenin's theorem, Millman's theorem, and simplification through equivalent circuits. The course then delves into the operation of two other elements, namely capacitors and coils, in circuits, both in transient and sinusoidal states. Mathematical formalism using complex notation to describe the latter will also be employed. Students will grasp these concepts through interactive lectures, and they will see practical applications and engage in exercises during tutorials. The setting up of electrical circuits and the visualization and measurement of signals/parameters and other phenomena will be put into practice during labs. An introduction to instrumentation using LabVIEW will also be offered during these sessions.

Finally, the electrostatics part aims to discover how the natural sciences formalize electrical effects related to electric charges present in matter. This formalism also allows for the study of spatial representation (coordinate systems) and field theory (differential operators). Phenomena depending on time (moving charges) are not covered. The various chapters of the course and associated tutorial sessions enable students to progress towards calculating the electric field and electrostatic potential generated by any charge system and describe the electrification of conductive materials. This introduction leads to capacitors and methods for storing electrical energy associated with them. A practical session illustrates the main effects of electrostatics (electric forces, point effects, electrostatic influence).

The aim of the course is to discover the way natural sciences formalize the electrical effects, linked to the electrical charges present in matter.

This formalism also makes it possible to work on the representation of space (coordinate systems) and field theory (differential operators). Time-dependent phenomena (moving charges are not covered). The different chapters of the course and the associated tutorial sessions allow students to progress towards the methods of calculating the electric field and the electrostatic potential generated by any system of charges, then towards the description of the electrification of conductive materials and thus to introduce capacitors and the associated methods of storage of electrical energy. A practical session illustrates the main effects of electrostatics (electrical forces, tip effects, electrostatic influence, etc.).

---

## Necessary prerequisites

Mathematical tools of 1A : Vectors, derivatives and integrals

---

## Évaluation

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

# Thermodynamics

## Introducing

---

### Description

Fundamental concepts (concept of systems, evolution of a system, mathematical tools in thermodynamics, ideal gas model). Work and heat. The first law of thermodynamics and the internal energy function. The enthalpy function and the steady-state systems. Thermodynamic functions changes during reactions. Physical equilibria for a pure substance (phases diagram, real fluids). Thermodynamic machines (enthalpy and entropy diagram, power plants, refrigeration units and heat pumps).

### Objectives

---

At the end of this module, the student should have understood and be able to explain:

- the inductive approach specific to thermodynamics which consists in generalizing, by defining them as laws, the conditions for conservation of energy and evolution of systems;
- the meaning, relevance and fields of application of the main thermodynamic functions (internal energy, enthalpy, entropy and free enthalpy).

The student should be able to:

- identify the studied system and to carry out on this system, in a current and systematic way, the mass balance, the energy balance and the entropy balance;
- use and interpret the enthalpy diagram and the entropic diagram of real fluids;
- apply thermodynamics to the understanding and description of equilibria between phases for a pure

substance;

- explain the operation of thermodynamic machines (power plant, refrigeration unit, heat pump), based on the two laws of thermodynamics and on the equilibria between phases.

### Necessary prerequisites

---

Function of several variables and partial derivatives concepts. Integrals of usual functions. Mastery of units. General knowledge of physics and mechanics from high school.

### Évaluation

---

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

## Industrial sciences

# Introducing

This is an introductory class to industrial design and manufacturing. Students are supposed to have a good knowledge of High School Maths and Physics.

## Description

- Industrial product lifecycle
- 3D computer modeling
- 2D and 3D drawing
- introduction to mechanical design

--> Time : 27,5 h.

## Évaluation

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

## Practical info

## Objectives

At the end of this module, the student will have understood and be able to explain (main concepts):

Basic knowledge of mechanical design and manufacturing.

The student will be able to:

1) Module CSM (Mechanical Design):

- \_ Identify parts of a mechanical system using a mechanical drawing
- \_ Model simple parts and simple assemblies using CAD software
- \_ Design a simple mechanical product, describe it using appropriate mechanical engineering wording

## Location(s)

 Toulouse

## Necessary prerequisites

## Geometrical optics

### Introducing

---

#### Description

- Generalities on the properties and the propagation of light. Reflection and refraction of light. Basic laws of geometrical optics. Fermat's principle.
- Image formation by optical systems. Stigmatism and paraxial approximation.
- Study of the basic components of optical systems (thin lenses and spherical mirrors).
- Application: study of some optical instruments (microscopes, telescopes, camera lenses, ...). Construction, working principle, and some figures of merit (linear and angular magnification, optical power).

The geometrical optics course is based on a triple approach: calculations, geometrical constructions and experiments (through simple observation experiments realized during the tutorial sessions and more complex experiments during the lab sessions.)

---

#### Objectives

The goal of this optics course is the study of optical phenomena and optical instruments through a geometric description of light propagation.

The course also aims at developing the students scientific reasoning skills.

---

#### Necessary prerequisites

Elementary notions of geometry and trigonometry.

---

#### Évaluation

# Thinking Together the New Socio-Ecological Challenges and our Responsibility

## Introducing

### Description

The student understands the orders of magnitude of the impacts of human activities in the 20th and 21st centuries: carbon impact, atmospheric CO2 concentration, species extinction, biodiversity, environment, etc.

The student is able to identify the contribution of engineering to these impacts

The student is able to consider solutions, not just technical ones (avoiding techno-solutionism)

The student is able to develop a systemic vision of human impacts on the planet (climate fresco, systemic and complexity analysis)

The student is able to analyze and critically examine the use of numbers and figures relating to socio-ecological issues, and their various interpretations.

The student is made aware of the concept of environmental justice (climate fresco, ethics).

The student is able to question certain engineering activities and their uses.

### Objectives

Thinking Together New Socio-Ecological Challenges and Our Responsibility:  
Understanding the limits of the Anthropocene and its

consequences for our present: socio-ecological issues

### Évaluation

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

## Master written communication techniques

### Introducing

---

#### Description

- course on the general principles of professional communication and its key points
- article review methodology
- work in Td on the report

#### Objectives

Master the principles of written communication in a professional context:

- restitute and reformulate information in a clear and concise manner
- structure information into logical groups and build a coherent logical plan
- formatting a professional report

#### Necessary prerequisites

none

#### Évaluation

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes :

## Search, analyze and present information

# Introducing

## Description

Research methodology : how to approach a literature search as well as the different steps of the search.  
Presentation of all the tools and all the resources available at the library.  
How to search on the Internet.  
The quality and the reliability of information.  
Introduction to copyright and plagiarism.  
Reminder of the presentation rules of bibliographies.

## Objectives

The training in literature search is a part of the Humanities domain of the first years.  
The « documentary project » is the practical exercise and the support of this training : the freshmen are divided in groups of 5 to 6 members in order to work on a project given by a professor, who then become their tutor. The students have to produce a written summary of their research along with a bibliography, and they have to make an oral presentation in front of a jury.

Initiating the freshmen to research and information treatment on a professional level.  
Increasing the students autonomy and as well as their level of knowledge of scientific and technical information.  
Giving the students a new set of skills for them to be able to elaborate an efficient research strategy.  
Improving the students knowledge about all the documentary tools at their disposal.  
Introducing the students to the rules of bibliography

writing and on how to use other people's research work.

## Necessary prerequisites

The freshmen also have to train themselves through a independant learning path on Moodle, before the literature search course.

## Évaluation
