45h

Introducing

Description

Objectives

At the end of this module, the student will

¿ Know the legal environment and responsibilities of a business activity

¿ Be able to objectively assess the financial health of a company and evaluate the rentability of an investment

¿ Realize a market diagnosis (benchmarking) and a business diagnosis in order to make decisions and set goals and strategies

¿ Collect the market data and put in action a business plan adapted to the means and goals of the company
Module L 2

The objectives, defined in reference to the CEFR for the 5 language activities, are specific for the language studied Chinese, German, Spanish ¿ and the level of the student.

They can be consulted on :

<https://moodle.insa-toulouse.fr/course/view.php?id=44>

In certain cases, students may be authorised to follow an English module instead of another language

Necessary prerequisites

Mobiles networks and wireless networks

ECTS
6 crédits

Hourly volume
55h

Introducing

Description

Objectives

At the end of this module, the student will have understood and be able to explain (main concepts):
Mobile networks and wireless networks functioning and deployment principles and their communication and network architecture

The student will be able to:

- understand the cellular architecture of mobile and wireless networks
- design and deploy a mobile cellular network
- handle the communication and network architecture of mobile networks, the roaming and handover principles
- master the radio access network (RAN) and its impact on the design of the whole network architecture
- understand the information transmission (voice, data, multimedia) in mobile and wireless network
- understand the energy management and the principles to adapt the emission power in wireless and mobiles networks
- identify the specificity of wireless local and personal networks and their effects on the network architecture
- handle the main functioning principles of local and

personal wireless networks

-design and deploy an enterprise local wireless network

Necessary prerequisites

Telecommunication and Network classes

Évaluation

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

[FRANCAIS] Systèmes de transmission

ECTS
5 crédits

Hourly volume
68h

Introducing

Electromagnetism, electronics, linear algebra, telecommunications and related hardware (basic notions).

Description

Objectives

At the end of this module, the student will have understood and be able to explain (main concepts):

- How the properties and limitations of channels influence transmission
- The different perturbation sources
- The properties of most antennas
- Modulation and demodulation techniques
- Coding and error-correction techniques.

The student will be able to:

- Identify the limitations of a channel and how they alter the signal
- Build a model of a transmission channel, so as to conceive an adapted and optimized transmission link
- Dimension an antenna, taking into account the propagation setting
- Use a software-defined radio module to carry out numerical modulations (ASK, FSK, PSK, APSK, QAM).

Évaluation

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

Necessary prerequisites

Internet and Security

ECTS
5 crédits

Hourly volume

Introducing

Description

Objectives

At the end of this module, the student will have understood and be able to explain (main concepts):

- Network interconnection part:
 - o the basic concepts and techniques allowing interconnecting local area networks in the Internet: repeater, bridge, router
 - o the basic concepts and techniques allowing interconnecting LAN in the Internet : subnetting, CIDR, VLAN, VPN, applicative proxy, NAT
 - o the main protocols of the TCP/IP Internet architecture : UDP, TCP, IP, ARP/proxy ARP, ICMP, DHCP (Note : RIP, OSPF and BGP are briefly introduced).
- Distributed algorithm part:
 - o principal characteristics of the distributed systems (asynchronism, distribution of control and the data, absence of common knowledge, dynamicity, etc),
 - o their specific problems and the difficulty of their solution in a distributed context (mutual exclusion, management of the shared data, distributed choice, diffusion, detection of the termination, etc),
 - o some generic algorithmic tools allowing to solve them: causality, distributed recursivity (waves) and distributed iteration (phases), specific topological

structures.

- Security part:
 - o principles of computer security through the properties that characterize it as well as the classification of the major threats and the corresponding countermeasures,
 - o main vulnerabilities of computer networks, in particular the Internet network as well as the corresponding countermeasures,
 - o main software vulnerabilities as well as some countermeasures.

The student will be able to:

- Network Interconnection part:
 - o do architecture choices allowing to take into account requirements and constraints associated to a LAN interconnection,
 - o do basic or complex addressing and routing schemas,
 - o set up (administrate) Ethernet and IP networks in the basic and advanced interconnection contexts considered in the course.
- Distributed algorithm part:
 - o solve generic problems involved in the implementation of systems distributed
 - o handle the most general tools allowing to conceptualize them.
- Security part:
 - o analyse a computer network and its software in order to identify the main vulnerabilities, from software and network point of view and to propose corresponding countermeasures to improve the security of the whole system.

Necessary prerequisites

Course Introduction to computer networks (3MIC)
Cours de programmation distribuée dans les
réseaux (socket API) (3MIC)

Évaluation

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

Object Oriented Design and Object Oriented Programming

ECTS
6 crédits

Hourly volume
85h

Introducing

Description

Objectives

At the end of this module, the student will understand and be able to explain (main concepts):

Object oriented application design based on the UML language, and the

object oriented programming (Java language)

The student will be able to:

- * Master object theory and the UML design modelling language
- * Master a design methodology based on use cases and integrating detailed analysis and design phases.
- * Apply the object concepts and a design methodology using the JAVA language
- * Understand the advantages of following best practices guidelines provided by the use of design patterns
- * Configure and use the configuration management tools (e.g. Git, Maven, etc.)
- * Explore the use of standard documents for project management, requirements specification, software design and software tests.
- * Configure and use collaborative workspaces applied to the software development process (e.g., JIRA).
- * Have an initial experience to the project management

challenges in a software development process project.

* Plan and play designer and developer roles within a software development process.

Necessary prerequisites

Structured programming (ADA, C, Pascal, etc)
Object-oriented programming (basic)

Description

Objectives

At the end of this module, the student will have understood and be able to explain (main concepts):

Physical and Sports Activities

The student will be able to:

to list the problems to be solved:

- ¿ Know the Physical and Sports Activity (rules, meaning, roles, etc.),

- ¿ Design the objective of the project.

to organize:

- ¿ Know the constraints, the resources, and the means available,

- ¿ Know how to choose and plan actions over time,

- ¿ Know how to get involved in the group and the project: know how to adapt, dare to stimulate action, know how to give up, propose, etc.

to regulate:

- ¿ Know how to observe,

- ¿ Know how to carry out a balance sheet,

- ¿ Know how to readjust the choices if necessary.

Individualized Professional Project

The student should be able to:

- ¿ Develop your professional vision and define a strategy.

- ¿ Customize, present and compare your project to professionals

- ¿ Enrich your professional network

- ¿ Set development axes, objectives and action plans

Necessary prerequisites

Learning outcomes 1st, 2nd, 3rd year.

Fundamentals in Computer Science

ECTS
7 crédits

Hourly volume
72h

Introducing

Description

Objectives

This course is heterogeneous course and groups 3 parts :

- Fonctionnal Programming & Caml (FP- Caml)
- Formal Logic and Logic Programming in Prolog (FL- Prolog)
- Advanced Algorithmics (« AA »)

At the end of this module, students are expected to :

[FP-Caml]

- understand and write pure functional programs,
- design recursive functions to iterate over recursive data types,
- define variants or parameterized types,
- more generally think in terms of higher-order functions in order to write reusable codes.
- describe the semantics of simple lambda terms
- have a basic theoretical understanding of the type systems theory

[FL-Prolog part]

- translate natural language statements into formulas of propositional logic and of 1st order predicate calculus
- apply several methods in order to check the validity

and

the consistency of a formula

- explain the fundamentals of logic programming and of Prolog.
- express problem solving as a demonstration (proof) based on axioms and theorems describing the particular properties of the problem.
- design a Prolog program and trace its execution

[AA Part]

Some paradigms in algorithmics for discrete optimization :

- Exhaustive enumeration
- Divide and Conquer
- Dynamic Programming
- Greedy Algorithms

- Apply formal modelling and verification techniques to communication protocols

Description

Évaluation

Objectives

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

At the end of this module, the student will have understood and be able to explain the:

- network architectures and protocols used in operator networks. More precisely, those related to Quality of Service, IPv6, SNMP, inter-domain & intra-domain routing, MPLS and traffic engineering
- wide area data network services that are in use in business, namely VPN (Virtual Private Network) services (Layer 2 and IP) and Carrier Ethernet services
- basics of network optimization, network planning and traffic engineering as well as the accompanying models and algorithms
- main concepts and formalisms used for the description and verification of communication protocols.

Practical info

Location(s)

 Toulouse

The student will be able to:

- Apprehend and master the functioning of Internet core networks (that may conform to the DiffServ framework, with IPv6 and/or MPLS enabled portions, etc.) and manage them
- Design and deploy VPN services for business
- Manage network devices via SNMP
- Apply the appropriate algorithms to network planning and network optimization problems

Architecture of telecommunication systems

ECTS

3 crédits

Hourly volume

41h

Introducing

Description

Objectives

At the end of this module, the student will have understood and be able to explain (main concepts):

- the particularities of different types of networks (optical, wireless, spatial networks) and their transmission channel.
- The specification, dimensioning, implementing and/or deployment process of equipments of telecommunication systems in order to optimize parameters such as quality of service, throughput, coverage.

Necessary prerequisites

I3MITC21 - Signals and telecommunications
I4RTC11 - Transmission Systems and Techniques

Évaluation

Description

Objectives

The module aims at motivating students with research activities through a selection of tutored projects. Each project involve a team off 6 students tutored by a researcher or an industrial partner. Those projects also benefit from a preliminary training on documentary research techniques to facilit the writing of a state-of-theart review of the domain. A course to project management techniques is also provided to guide students during the realisation phase of the project.

At the end of this module, the student wil have a practical experience of the following activities :

- identify a bibliography on a given topic, and present it through a standard formulation (IEEE form).
- write a state-of-the-art synthesis.
- precise the perimeter of the realization phase.
- apply project management and collaborative work techniques.
- write a project report and prepare a presentation in english for its project defense.

Logic and problem solving artificial intelligence

ECTS

4 crédits

Hourly volume

Introducing

Description

Objectives

This course is heterogeneous ; it is composed of 3 parts :

- Artificial Intelligence search algorithms for Problem Solving (AI-PS)
- Semantic Web (SW)
- Meta-heuristics (MH)

At the end of this module, students are expected to

[AI-PS]

Develop programs that implement

- A* algorithm for searching the best action plan in a problem-state space
- AO* Algorithm for searching the best problem decomposition graph
- Algorithms for 2-players games : minmax, negamax, alphabeta

[SW part]

Explain the major issues of the semantic web.

Implement the RDF graph model and its use for describing web resources and their metadata.

Design ontologies for knowledge representation, with the OWL language.

Develop an application that access to some ontologies

and infers new knowledge through a reasoning.

[MH Part]

Be familiar with the main classes of discrete decision problems and optimization problems.

Implement three main classes of metaheuristics :

- Local search methods
- Evolutionary methods
- Hybrid methods

Necessary prerequisites

Algorithmics and programming

Logic for knowledge representation (1st order predicate calculus)

Tree search algorithms

Exact and approached methods (heuristics) for combinatorial optimization

Évaluation

L'évaluation des acquis d'apprentissage est réalisée en continu tout le long du semestre. En fonction des enseignements, elle peut prendre différentes formes : examen écrit, oral, compte-rendu, rapport écrit, évaluation par les pairs...

Software and hardware architecture for computer systems

ECTS
6 crédits

Hourly volume
65h

Introducing

Description

Objectives

At the end of this module, the student will have understood

and be able to explain (main concepts):

- Manipulation of with various type automata, language

theory, parsers, compilers;

- Development of a compiler, management and allocation

of a program memory;

- Introduction to quantic computing

- Specification of hardware components and architectures

in a high-level language;

- Taking Into account the specific material constraints for

embedded systems with limited resources.

- architectures and technologies for green computing, green software for sustainable development

The student will be able to:

- Create parsers and compilers while considering

constraints from the environment (embedded or not).

- Understand and design processor architectures

- Select a processor architecture adapted to the software

application and the environment.

- Specify a hardware system in a concurrent language used widely in industry, VHDL and implement this system on an FPGA.

Necessary prerequisites

C programming, computer architecture

Évaluation

Description

Objectives

Objectives:

At the end of this module, the student will have understood and be able to explain (main concepts):

- How to answer the demand of the civil society for technical and scientific information
- How to carry out critical analysis in order to give appropriate answers when questioned about such issues
- How to consider the circulation and content of information within the organizations in which they will be hired

The classes given in English will focus on the specific linguistic characteristics of the English used in scientific contexts in order for the students to understand and master them.

The students will also be made aware of the specificities of scientific English as relates to publications in his specific field of research.

Module L 2

The objectives, defined in reference to the CEFRL for the 5 language activities, are specific for the language studied : Chinese, German, Spanish and the level of

the student.

They can be consulted on :

<https://moodle.insa-toulouse.fr/course/view.php?id=44>

In certain cases, students may be authorised to follow an English module instead of another language
